

First Map	Explanation	Category
Backport	The same issue was fixed in an older version as part of the maintenance process.	Workflow
Block	An issue cannot be resolved until another issue is resolved.	Temporal/Causal
Bonfire Testing	An issue got discovered while testing another issue.	Workflow
Breaks	An issue breaks the solution of another issue, a regression.	Workflow
Cause	Issue A describes a problem that is at least a partial root for Issue B. Issue A needs to be resolved before Issue B can be resolved. Or the fix for Issue A causes Issue B.	Temporal/Causal
Clone	An issue got duplicated intentionally by the users, for instance when an old bug is resurfacing in a newer version. Clone links can also be set manually without cloning an issue.	Duplication
Depend	An issue cannot be resolved until another issue is resolved.	Temporal/Causal
Derive	An issue was derived from another issue. For instance, while working on multiple issues of a similar topic, the developer noticed that they had an overarching theme or they could be refined into one issue.	Workflow
Detail	An issue is detailed by another, when the other issue contains a more fine-granular description of the task at hand.	Workflow
Documented	An issue provides the documentation or log files for another issue or its fix.	Workflow
Duplicate	An issue is already in the system and someone added the same issue by accident.	Duplication
Epic	A link that consists of higher-level issue which has multiple low-level issues attached to it, similar to Parent-Child or Incorporate.	Composition
Fix	The resolution of an issue fixes another issue as well.	Workflow
Follow	An issue should be done after another issue, a temporal dependency.	Temporal/Causal
Implement	An issue implements another issue.	Workflow
Incorporate	One issue is included, contained, or incorporated in another issue. For instance, one issue is used as a issue to collect multiple other issues, similar to Parent-Child.	Composition
Parent-Child	An issue (the parent) has multiple subtask issues (the children). The children issues are parts of the parent issue.	Composition
Precede	An issue should be resolved before another issue.	Temporal/Causal
Relate	Two issues are related to each other in a general way or stakeholders are unsure about the nature of the connection.	General Relation
Replace	An issue was created in order to replace an old one, often resolution is ``Duplicate".	Duplication
Require	An issue cannot be resolved until another issue is resolved.	Temporal/Causal
Split	An issue was split into multiple issues. For instance, when the original issue was too large and it made sense to split into multiple smaller tasks.	Composition
Subtask	An issue is a part of a larger set of issues.	Composition
Supercede	Another issue was refined based on existing issues.	Workflow
Test	An issue is created to test the fix of another issue.	Workflow
Trigger	While working on an issue the another issue was triggered.	Workflow
finish-finish	Two issues have to be finished at the same time or in the same patch, a temporal dependency.	Temporal/Causal
finish-start	An issue has to be finished after another issue, a temporal dependency.	Temporal/Causal
start-start	Two issues have to be started together, a temporal dependency.	Temporal/Causal
start-finish	The completion of one issue sets off the start of another issue, a temporal dependency.	Temporal/Causal
